startup researcher
job description

about us

zygacom is a new startup based in croydon, london

we are growing a business that helps financial services' firms to adopt emerging technologies

in the future we want to develop our own data and analytics products

the role

we are looking for someone with a keen interest in business and emerging technologies

to help us to research startups and find new ways to use technology in financial markets

responsibilities

find startups at conferences, from introductions, from your expanding network and online

meet startup teams to understand products, services and people

research competitive advantage, see through the spin to form your own opinion

combine a taxonomy with a series of metrics to enable comparison and track performance

write reports on the companies, the technologies and their applications

present back to our clients and help them conduct experiments with new products

about you

you are an entrepreneur at heart

you are fascinated by emerging technologies and you think outside of the box

you are interested by the financial markets and determining how businesses make money

you enjoy learning and helping others to understand complex or technical concepts

you are industrious, articulate, numerate and an aspiring wordsmith

you are confident and social and you like to meet new people

you may have some hands on programming experience or are keen to learn

challenges

you're prepared for a steep learning curve focused on financial services and technology

you know to expect a demanding environment which requires maximum role flexibility

you're comfortable with some autonomous working

benefits

in a startup from the start

access to cool technology, big business, small business and interesting people

training on whatever interests you

salary to £30k based on fit with regular pay reviews and an incentive scheme

25 days holiday each year plus bank holidays

5% employer contribution to your pension

apply

email alex@zygacom.com with your c.v. and tell us why you are interested in our role
